FUND OBJECTIVE

The TC Share Centre Multi Manager Adventurous Fund aims to achieve capital growth in excess of the IA Flexible Investment Index, primarily through investment in a portfolio of Collective Investment Vehicles providing diversification across a range of underlying assets.

OUR PHILOSOPHY

The funds' assets are managed on a medium to long-term perspective, which we believe reduces the ever increasing effect of market noise and should help them outperform more short-term momentum-orientated managers over the long term. This may mean that the funds underperform their sector peers in some years, as the managers prefer not to chase markets, but instead look for assets or sectors which they believe are undervalued and have strong potential for a re-rating. Therefore, it is unlikely the portfolios will experience a high turnover and equally, we seek funds to invest in that also have lower than average turnover compared to sector peers.

DIVERSIFICATION

We attempt to control risk by asset diversification, sector diversification, underlying management group diversification, a core of high profile liquid funds and a satellite of boutique managers that may have a concentration of institutional investors. We also continually monitor potential threats, which might trigger an adverse event in a particular asset class.

RISK MANAGEMENT

We spend a significant amount of time looking for and understanding inflation risk, volatility risk, capital risk and diversification risk, which can all have a detrimental impact on investment performance if not appropriately managed. Our aim is to balance the funds appropriately, to protect or take advantage of the opportunities market conditions may present. Historically, we have delivered good performance on volatility levels, below that of the sector average.

DISCRETE PERFORMANCE SUMMARY

QUARTERLY REVIEW

US Q1 earnings helped support markets in early Q2, despite slowing growth continuing to weigh on investors' minds. Tech giants delivered standout returns, staving off concerns of an earning recession for the time being. Trade tensions between the US and China flared up again over the period as both sides walked away from negotiations, testing the resilience of the equity markets. Weakening economic data and unsettling trade negotiation raised the expectations that rate cuts by the Federal Reserve (Fed) would be around the corner, pushing up all assets prices.

Brexit politics continued to dominate headlines nearer home, resulting in a sliding pound. Economic data softened and the FTSE All Share lagged most other major markets.

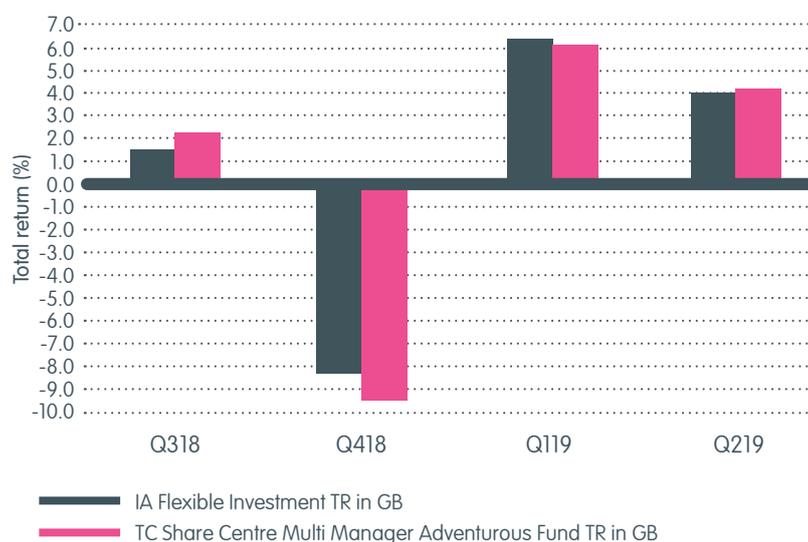

In Europe the struggling manufacturing sector weighted on the European Central Bank (ECB) to add stimulus measures once again, reviving its equity market.

Asian markets, including Japan saw small gains, as the Chinese stimulus started to feed through. Emerging markets equities benefitted from a looser US interest rate outlook and easing oil price from Q1, despite supply disruptions emerging again at end of June.

Over Q2, we saw prices surge in all assets and all major markets, with gold and bonds leading the gains.

ANNUAL REVIEW

Markets have got off to a good start in 2019, which historically has been a precursor to riding higher by the year end. The uplift in sentiment has been carried forward into Q2 and central banks stimulus may push them even higher on from here. Over the period, both bond and equity markets have been signalling a mixed risk appetite from investors. Looking ahead, market momentum is likely to face a number of headwinds from tensions over spiralling trade disputes, oil supply concern, pressure from the US government on Fed rate setting, Brexit and the lurking risk of earnings recession.

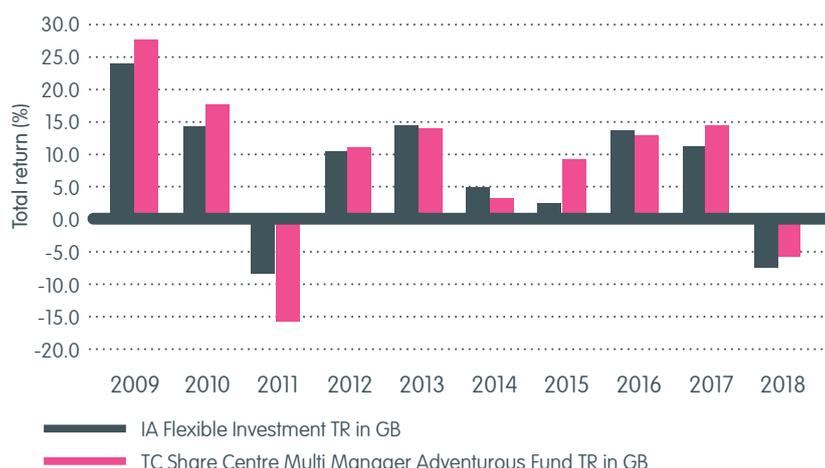

At the start of Q2, we deployed some cash to further strengthen diversification within the portfolios and to support market participation in assets that should provide a cushion to perceived downside risks. Over the period, we have been tentatively increasing our European positions and continuing to shift bond assets around in the portfolios to improve liquidity and quality. We have also been building up our gold, infrastructure and alternative interests' positions to lower correlation while reducing day-to-day volatility. We could see a risk reward pay-off as these less liquid assets should compensate for the higher level of risk taking ahead.

On a discrete relative bid to bid basis from Q2 2018 to Q2 2019, the TC Share Centre Multi Manager Adventurous fund underperformed the IA Flexible Investment sector, returning 2.37% against the sector which returned 2.95%. In this Q2 the fund returned 4.23%, outperforming the sector which returned 4.02%. The fund's 5-year discrete annualised return stands at 8.09% against the sector which returned 6.52%, on total return bid to bid basis. The fund has delivered an above peer average annual return in relation to the risk it has taken over 5 years period.

We have delivered positive returns in eight of the past ten years, generating a cumulative return of 128.73% against that of the sector, 121.96%, over ten years. We continue to stand by our commitment to positive returns, low volatility and a smooth ride and not too many surprises for our clients.

ASSET PERFORMANCE

MONTHLY RETURNS FOR THE QUARTER ENDING JUNE 2019

In April, global equities gained on the back drop of a slight return of growth from Chinese manufacturing sector, easing worries about slowing global growth. The US stock market landed higher on the strong momentum and positive Q1 earning results. Brexit deadline came and went with no quantifiable conclusion leading to a negotiated “flexible extension”, while the Conservative party took its time to find a new leader. This saw interest rate hikes put on hold, left the economy travelling in the middle lane and UK equities saw only moderate gains, which lagged other developed economies.

Market sentiment was dampened in May as the US president perpetuated trade tensions, raising the threat of retaliation from the Chinese government and casting further concern over already weakened global growth. All major stock markets tumbled as investors shunned equities for safe-haven assets. Bonds gained, dollar remained strong and gold surged whilst oil price softened. US Treasury 10-year yields fell below those of 3-month bill, a potential harbinger of recession.

Entering June we saw bullish sentiment towards the US stock market lift as the market grew confident the Fed could cut rates earlier. ECB also hinted at more stimulus measures designed to recharge the struggling economy, rejuvenating the Eurozone equities. Over the month, gold and the Latin America market rallied in response to expectations of Fed rate cuts ahead; the US and Eurozone equity markets led gains and bonds surged as well.

What keeps us up at night?

- Geopolitical tension and escalation of trade dispute
- US policy mistakes
- Impact of further monetary policy as global growth grinds lower

What we like

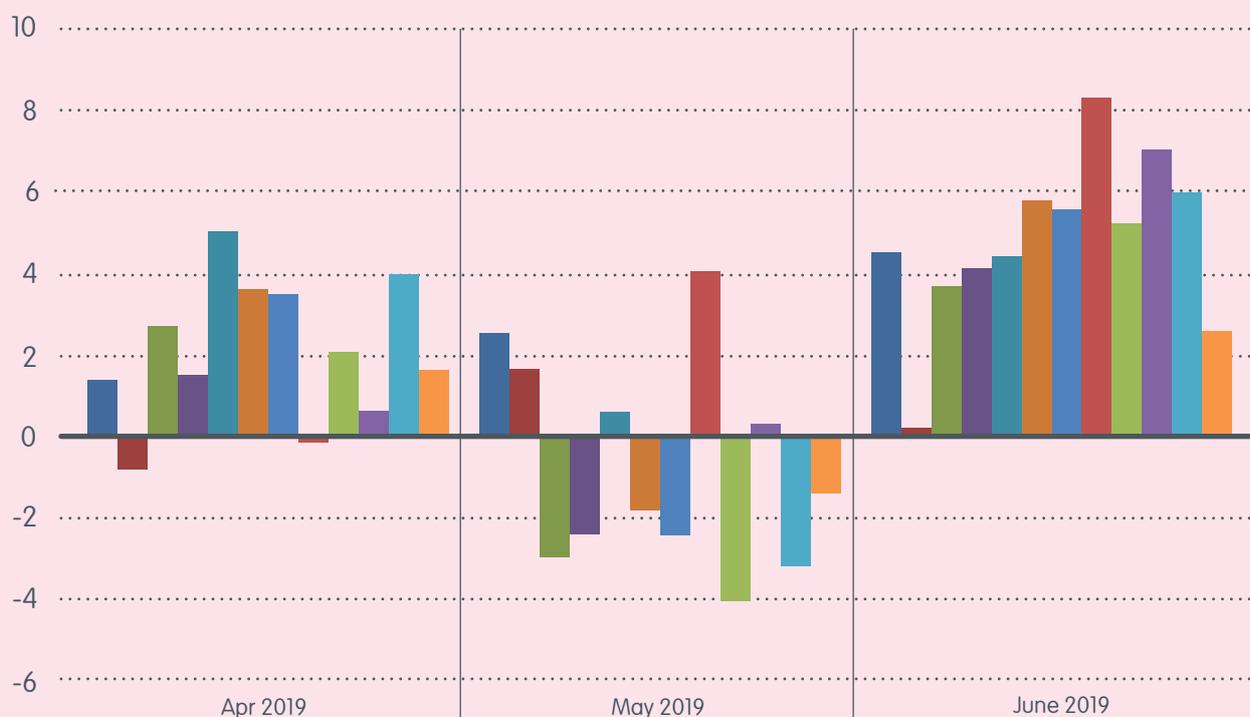

- UK, Europe, Japan and India
- Healthcare, Insurance, Mortgage and Asset Backed Securities (MBS, ABS), Infrastructure and interests in private equity
- Low duration, good quality, flexible bonds
- Gold

Invest in listed Infrastructure

Oxford Economics presented research, in the not too distant past, forecasting global infrastructure investment needs to be \$94 trillion between 2016 and 2040, an average of \$3.7 trillion per year, and a further \$3.5 trillion required to meet the United Nations’ Sustainable Development Goals for electricity and water. Economies need reliable infrastructure to help get goods and services to market, this means development and maintenance of efficient strategic assets like road, rail, sea ports, gas, electric and water utilities and communications. In developing countries this means new facilities where as in the US and Europe it is likely to result in upgrading current facilities and improving their efficiency.

Monthly return for the quarter ending June 2019

Source: FE Analytics

Companies involved in infrastructure development are naturally seen as being defensive and mature, suggesting reasonable levels of dividends, and dividend growth with many having inflation linked pricing built into their models/services. This is further aided by high barriers to entry, strong pricing power, sustainable growth and predictable cash flows making the asset class a relatively safe haven in an uncertain financial world. For these reasons infrastructure stocks are often referred to as bond proxies, as they are seen as protecting capital to provide a stable income while minimising volatility relative to the wider equity market. Investing in listed infrastructure companies could be appealing to investors who prefer a stable income with fewer surprises, especially in the climate of economic uncertainty.

Participant in Private Equity

Private equity investing can broadly be defined as “investing in securities through a negotiated process”. The majority of these investments are in unquoted companies, at different stages of their life cycle. It is typically

a transformational, value-added, active investment strategy. One of the core skills of a successful private equity manager is to identify unquoted companies, which have immense growth potential, and also actively create the conditions to further advance their growth.

Within a well balanced portfolio, the introduction of private equity can improve diversification whilst providing opportunity to generate higher absolute returns when such companies go IPO. The long-term returns of unquoted companies represent a premium to the performance of public equities, compensating for the higher level of risk taken by investors.

The appropriate investment structure should be an important consideration as well, investment trusts have recently been held in high regard as they offer the advantage of discounts and premiums supporting liquidity.

NOTABLE CONTRIBUTORS

Pictet Russian Equities advanced along with a strengthening oil price and upbeat economic outlook in the region.

Man GLG Continental European Growth consists of names chosen for their ability to prosper and grow profitably despite, not because of, the European economy.

Polar Capital Global Insurance focuses on non-life insurers operating in the property and casualty businesses which are less sensitive to macroeconomic conditions and historically has tended to be more resilient in challenging financial markets.

NOTABLE DETRACTORS

Woodford Patient Capital Trust has been adversely affected by the suspension of Woodford Income Fund and currently trades at a steep discount to its net asset value (NAV). While this may present an opportunity we remain cognisant of the situation with the Equity Income fund and prefer to monitor developments for the time being.

Jupiter India struggled in Q2, as headwinds from the rising risks of oil supply disruptions, due in part to tension between the US and Iran and a strong dollar persisted.
